Table of Contents

1. Introduction

The **In-Class Sensing** tool allows students to:

- Give live feedback to instructor during class or lesson in the active session
- Check learning points for each session
- Post questions regarding the learning points or lesson
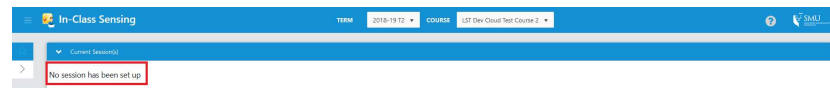

2. Accessing the In-Class Sensing Tool

1) Under **Home**, click the **In-Class Sensing** link to launch the **In-Class Sensing** Tool.

2) This will bring you to the landing page of **In-Class Sensing Tool** – where you will see the **current active session** in your course that has been set up by your instructor.

Note: If there is no session set up by your instructor or the start time of the session has not started, the page will be displayed as **no record(s)**.

If your instructor has set up learning points for this class session and there is question being posted by any students, you will see them in the respective panels.

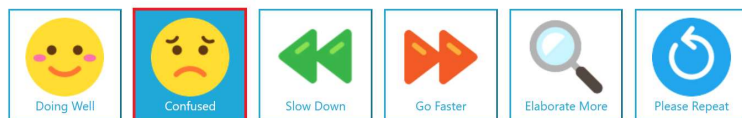

3. Giving Live Feedback

1) You are able to give a live feedback to your instructor during the class session so the instructor is able to know whether you can understand the lesson or follow the lesson pace.

There are **six types of feedback** that you can select:
a) Doing Well
b) Confused
c) Slow Down
d) Go Faster
e) Elaborate More
f) Please Repeat

2) You can click on any of the six buttons to indicate your feedback. For example, you can choose **"Confused"** when you are unsure of the topic that your instructor is going through at the moment.

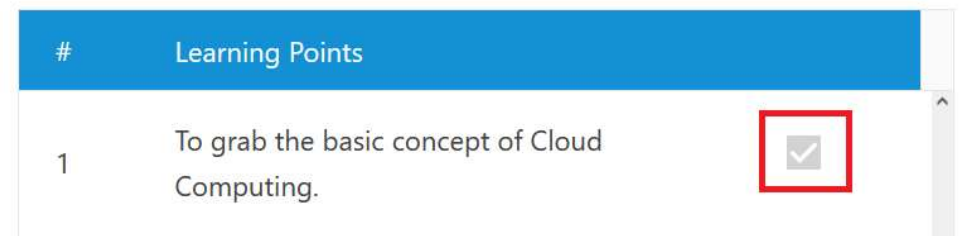

4. Checking Learning Points

1) If your instructor has set up learning point(s) for the session, it will be reflected in the **Learning Points** section.

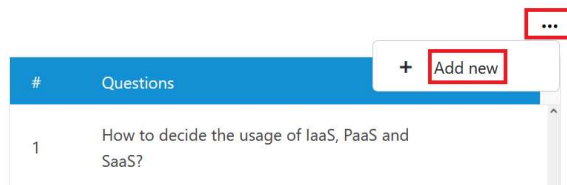

2) Once you have achieved the learning point(s) that were outlined by your instructor, you can check them so your instructor knows that you can follow up and understand the lesson.

5. Posting Questions

1) If you are unable to understand anything regarding the learning points or the topic that your instructor had gone through, you can post a question to your instructor by clicking on the **"3 dots"** ⋯ icon in the **'Questions'** panel and select **'Add new'**.

2) A side panel will slide out from the right side of the screen, enter your question and click **'Save'** to post the question.

3) If the other students also posted questions, you will be able to view it in the **Questions** section too.

6. Feedback

If you have any suggestions/feedback about this tool, please email us at:
elearn@smu.edu.sg.
